# Sistemas Distribuídos

Ramon Melo

## O problema

Processos produzem e enviam eventos de forma concorrente

Não há memória compartilhada entre processos

Processos não necessariamente estão com os relógios sincronizados

## A solução

Processos comunicam-se através de *sockets* 

Relógio lógico substitui o relógio verdadeiro

Eventos gravados somente após confirmação de todos

Python 3.5

+

multiprocessing

## 3 threads por processo

- Thread principal inicia as demais e grava as mensagens
- Thread servidora recebe e parseia mensagens (maior gargalo)
- Thread cliente produz eventos e envia mensagens

Fila de mensagens com cadeado intermedia comunicação

#### Módulos

• Multiprocessing.dummy (Process, Queue, Lock)

• socket, select

 $\bullet$  re

#### Módulos

Multiprocessing.dumn

socket, select

re

```
